DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Biebuyck et al. (US pat #5,817,242) in view of Biebuyck et al. (US pat #5,925,259)

With respect to claims 1 & 2, Biebuyck et al. teach a stamp device for printing a pattern on a surface of a substrate having a carrier layer provided on it's first side a patterned material (12), combined with a second side made of a softer material (11) forming a two-sided rigid carrier layer. An elastic layer (14) can also be added over the patterned material (12) or PMMA. While Biebuyck et al. (US pat #5,817,242) teach the two-sided rigid carrier layer there is no mention of a specific contact means having a soft layer, that which Biebuyck et al. (US pat #5,925,259) teach by using a printing master roller (95), which carries an elastic layer (951). Biebuyck et al. (US pat #5,925,259) also teach that printing should not be restricted to a flat form and rollers or half-spheres is an effective means of transferring a stamped pattern onto a substrate, making it obvious to one ordinary skilled in the art to modify Biebuyck et al. (US pat #5,817,242) to optimize the properties of the materials independently of each other, thus it's advantageous to have a patterned layer to which features can be readily written by a lithographic press. It is also advantageous to produce the patterned layer from a

preferably non-deformable material, which accurately preserves the pattern, therefore, the need for a two-sided rigid carrier layer.

With respect to claims 3-6, (see Biebuyck et al., US pat #5,817,242, col. 2, lines 33-50).

With respect to claims 7-10 & 29 (see Biebuyck et al. US pat #5,925,259, col. 2, lines 58-67; col. 3, lines1-12).

With respect to claims 12, 13, 16, 18 & 19 (see Biebuyck et al. US pat #5,925,259, col. 8, lines 1-20).

With respect to claim 17 & 27, (see Biebuyck et al. US pat #5,817,242, col. 3, lines 35-38).

With respect to claims 20, 21, 28 & 30 (see Biebuyck et al. US pat #5,925,259, col. 7, lines 34-54; col. 8, lines 58-65).

With respect to claims 22-26, (see Biebuyck et al. US pat #5,817,242).

Allowable Subject Matter

- 3. Claims 14 & 15 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The applicant's attention is invited to the patent Levinson et al. (US pat # 6,140,023), Suleski (US pat # 6,027,595), Yializis (US pat # 6,083,628).
